STEP #1

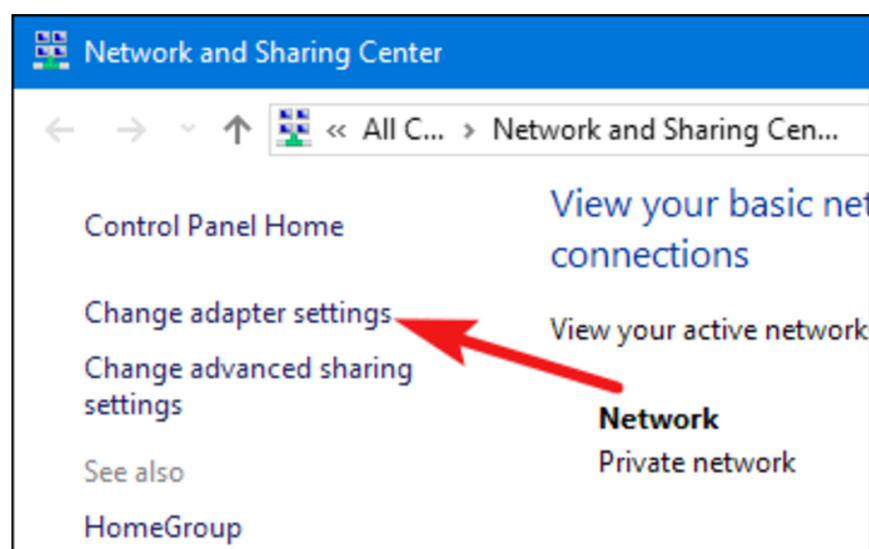

Note: The techniques in this article work in Windows 7, 8, and 10.

Right-click the network status icon in your system tray, and then click “Open the Network and Sharing Center” on the context menu.

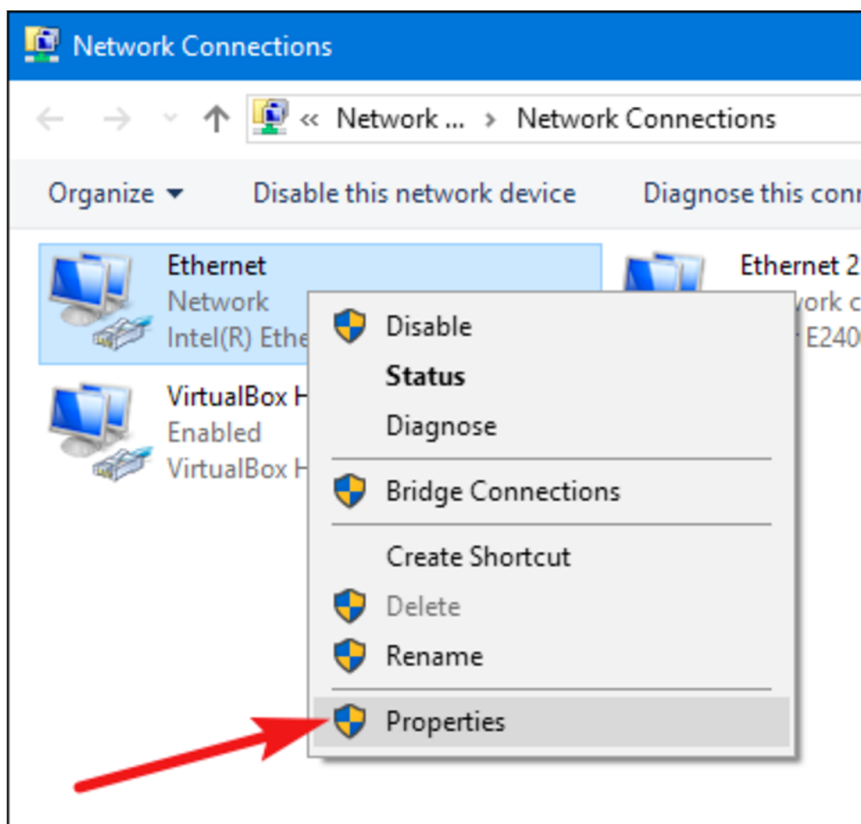

STEP #2

In the “Network and Sharing Center” window, click the “Change adapter settings” link at the upper left.

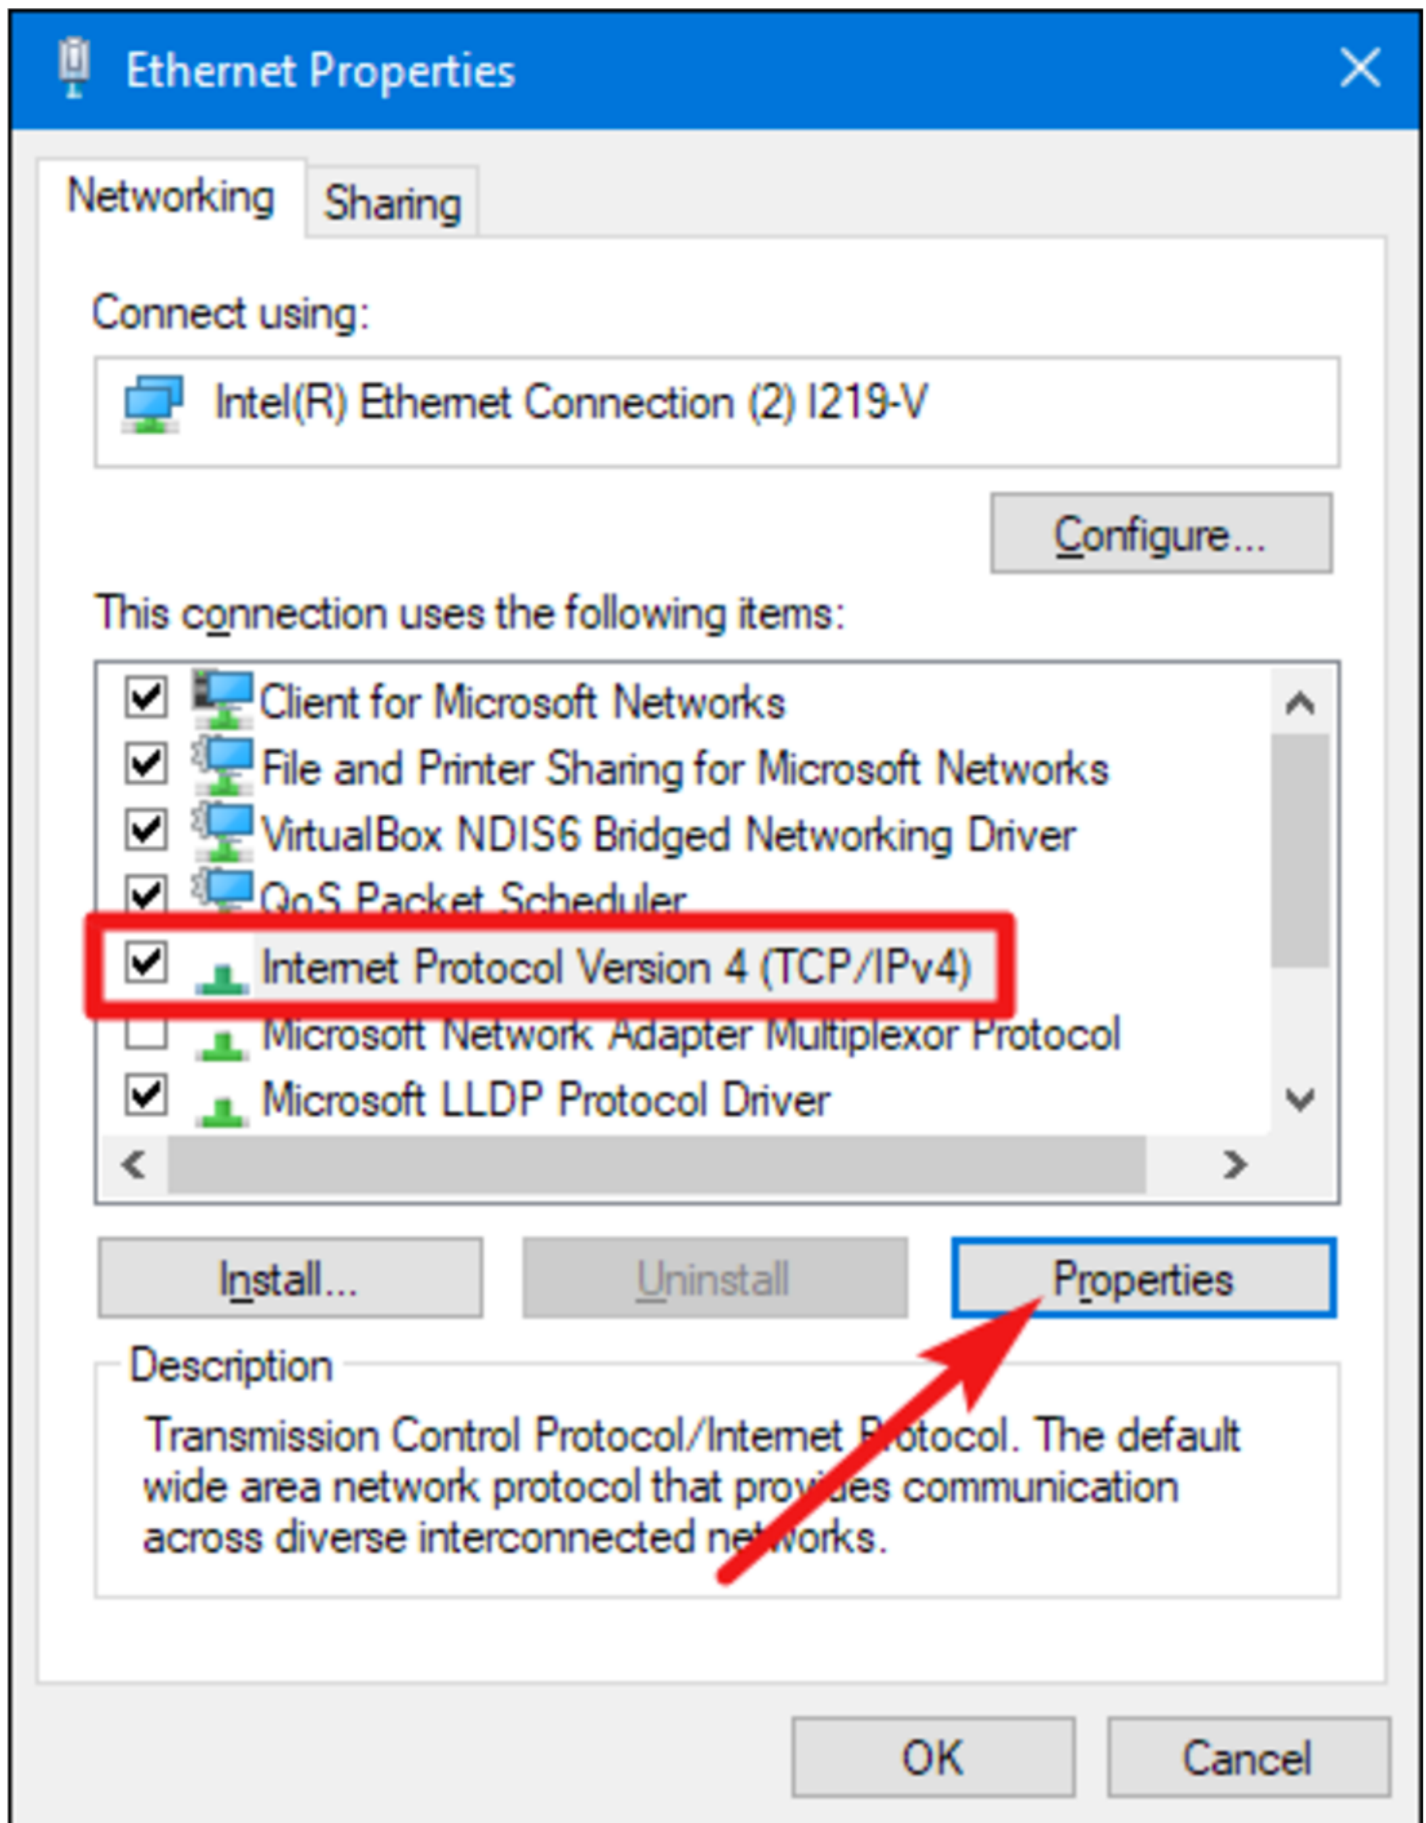

STEP #3

In the “Network Connections” window, right-click the connection for which you want to change the DNS settings, and then click “Properties” on the context menu.

STEP #4

STEP #5

Internet Protocol Version 4 (TCP/IPv4) Properties

General Alternate Configuration

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

☒ Obtain an IP address automatically

☐ Use the following IP address:

IP address: . . .

Subnet mask: . . .

Default gateway: . . .

☐ Obtain DNS server address automatically

☒ Use the following DNS server addresses:

Preferred DNS server: 8 . 8 . 8 . 8

Alternate DNS server: 8 . 8 . 4 . 4

☐ Validate settings upon exit

Advanced...

OK Cancel
